

**Safety Assist  
Data Integration  
with Third-Party  
Software**

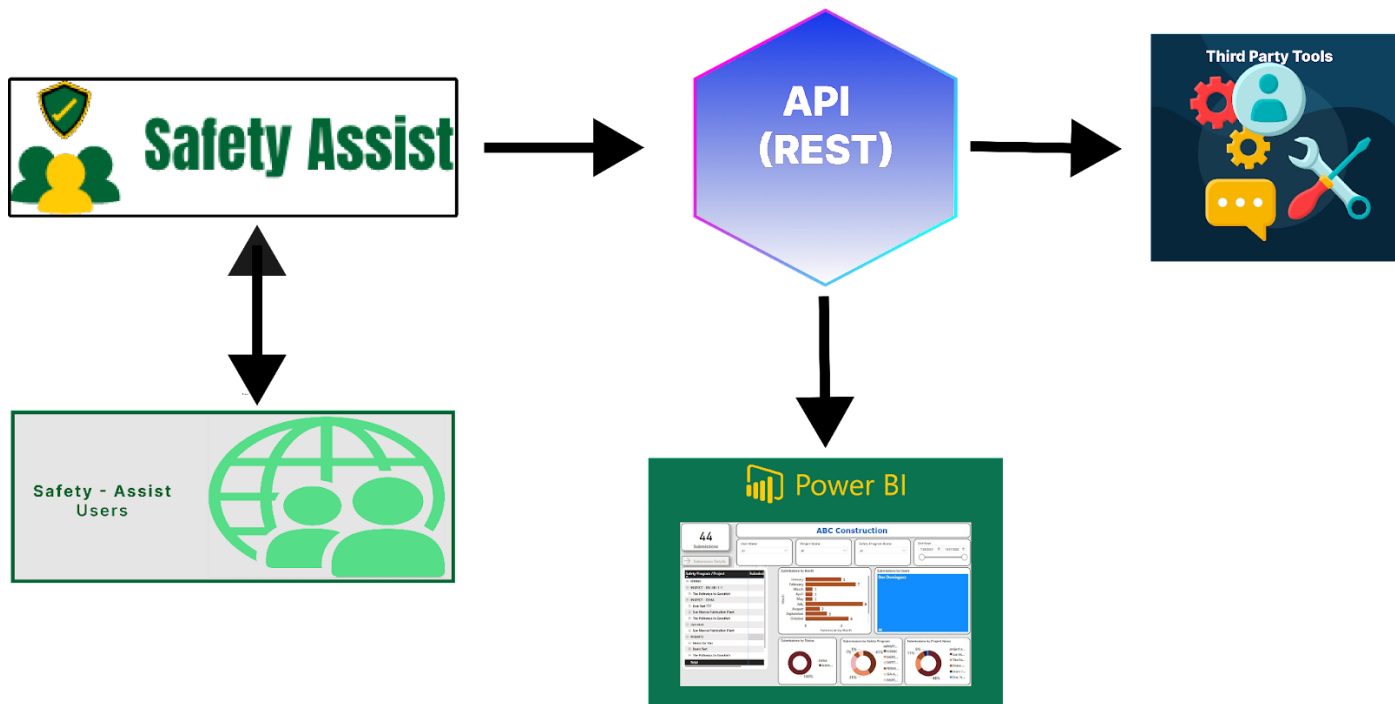

# Introduction

Empower your safety initiatives by seamlessly integrating Safety Assist data with various third-party tools and systems.

Safety Assist Solution offers a robust Rest-based API that ensures secure access to submission details and corrective actions, enabling you to connect your safety data with other platforms effortlessly.

REST API Access: You will be provided with API access keys for both submission data and corrective action data from the Safety Assist platform. With these keys, you can make secure API calls using HTTPS to retrieve data in JSON format.

Data Exploration and Customization: The live data accessible through the REST API allows you to explore real-time safety information. The usage of secure access keys ensures that only authorized users can discover and share the data appropriately.

Technical Specifications: *Contact us to know more about technical aspect of Safety Assist Integration via API.*

Integrating safety data from Safety Assist into third-party tools and systems ensures a holistic approach to safety management and empowers you to make data-driven decisions for enhanced safety practices.
